Hiring Manager,

My name is Dylan Kehres and I am a graduating senior Computer Science major concentrating in Mobile Computing at Bradley University. My work experience shows that I master my position and excel in the companies I have worked for. From Crew Member to Shift Manager, from Intern to Event Manger, my employers noticed my work ethic and put my multitude of skills to the test. My 3 best skills are communication, leadership, and problem-solving.

Working as Trucking Dispatcher, if I did not listen carefully and ask the right questions it may result in the losing money, breaking laws, or endangering travelers on the roads. I needed to be bold to negotiate the best prices and still be friendly to the brokers in order build business relationships. My adept communication skills allowed to do my job with ease.

As Event Manager I was required to direct employees and delegate tasks to ensure we were prepared for snow events. When snow fell I organized of all workers in the office and in the field to ensure customer satisfaction. I was able to pair my communications skills with effective leadership to lead our employees until the job was complete.

I solve problems with a ground up approach to be sure I understand the root of problem and efficiently implement a broad solution. I was able to learn new skills to take on problems and implement scalable solutions. I find it enjoyable take on difficult tasks and develop a lasting solution for the user. I combined and tested these skills when completing projects such as Sequence Analyzer for Dynamic Systems and several other software development projects.

I am excited to apply to your company's Software Engineer position because of your focus which aligns with my goals to simplify the lives of users, strengthen their trust in technology, and promote safety. I believe I would be a great asset to your company because of my experiences in my degree program and through my employment history. I look forward to speaking with you about my programming experience and further details about the Software Engineer position.

Regards,

*Dylan Kehres*
